DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- Species I:** Embodiment drawn to a disk drive controller and method for multiplexing control signals for disk drives, as shown in figures 3 and 4 of applicant's specification (found in Paragraph [0011-0012])
- Species II:** Embodiment drawn to a method for doubling a data rate on a disk drive serial bus, as show in figure 15 (found in Paragraph [0014])
- Species III:** Embodiment drawn to a method for encoding additional commands in a coding standard, as shown in figure 14 (found in Paragraph [0013])

2. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election. Currently, no claim is generic.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
